DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-4 are rejected under 35 U.S.C. 102(e) as being anticipated by Ziemer et al. (US Patent 6,122,310).

(1) With regard to claim 1, Ziemer et al. discloses a method for conveying information over a wireless interface in the form of a digitally encoded message, comprising the steps of providing a set of bits as a first piece of information to be transmitted, applying a certain baseband signal processing method to process the bits to be transmitted, providing a second piece of information to be transmitted (col. 8, line 62 - col. 9, line 18) and selecting the baseband signal processing method from a set of allowed baseband signal processing methods in accordance with the provided second piece of information (col. 10, lines 42-58).

(2) With regard to claim 2, Ziemer et al. also discloses in Fig. 2, a transmitting device (200) for transmitting information over a wireless interface in the form of a digitally encoded message, comprising: means (206) for providing a set of bits as a first piece of information to be transmitted means for applying a certain baseband signal processing method to process the bits to

be transmitted, means (208) for providing a second piece of information to be transmitted and means for selecting the baseband signal processing method (212, 214) from a set of allowed baseband signal processing methods in accordance with the provided second piece of information.

(3) With regard to claim 3, Ziemer et al. also discloses in Fig. 3, a receiving device for receiving information over a wireless interface in the form of a digitally encoded message, comprising: means (305) for receiving a set of bits as the representative of a first piece of received information means for applying a certain baseband signal processing method (306-309) to process the set of bits, means for selecting (310) the baseband signal processing method from a set of allowed baseband signal processing methods so that applying it produces a first piece of received information which satisfies a certain criterion of acceptance and means (312) for providing a second piece of received information in the form of the identified baseband signal processing method (col. 10, lines 42-58).

(4) With regard to claim 4, claim 4 inherits the limitations of previous claims 1-3.
